

Invantive

# ObjectDefinition Class

Class containing object definition information.

## ▷ Inheritance Hierarchy

**Namespace:** [Invantive.Data](#)

**Assembly:** Invantive.Data.Interfaces (in Invantive.Data.Interfaces.dll) Version: 20161.0.16287.1530

## ▷ Syntax

The [ObjectDefinition](#) type exposes the following members.

## ▷ Constructors

## ▲ Properties

	Name	Description
	<a href="#">CallSafeName</a>	Gets or sets the call safe name.
	<a href="#">CanDelete</a>	Gets or sets whether the user can delete.
	<a href="#">CanInsert</a>	Gets or sets whether the user can insert.
	<a href="#">CanSelect</a>	Gets or sets whether the user can select.
	<a href="#">CanUpdate</a>	Gets or sets whether the user can update.
	<a href="#">CatalogName</a>	Gets or sets the catalog.
	<a href="#">CreationDate</a>	Gets or sets the creation date.

	Description	Gets or sets the description.
	Documentation	Gets or sets the documentation.
	EstimatedNumberOfRows	Gets or sets the estimated number of rows.
	EstimatedSizeKb	Gets or sets the estimated size in KB.
	Example	Gets or sets the example.
	Fields	Gets the fields.
	FullQualifiedName	Fully qualified name.
	FullTableScanRowRetrievalTotalClockTimeMs	Total clock time used to execute full table scans in milliseconds.
	FullTableScanRowsRetrieved	Number of rows retrieved by full table scans.
	FullTableScansExecuted	Number of full table scans executed.
	IsPartitionSpecific	Gets or sets whether an object is subject to change when the partition changes.
	LabelList	Gets or sets the list label.
	LabelPlural	Gets or sets the label plural.
	LabelSingular	Gets or sets the label singular.
	LastUpdateDate	Gets or sets the last update date.
	MeasuredAverageAccessLatencyMs	Latency measured.
	PointQueriesExecuted	Number of point queries executed.

	<a href="#">PointQueriesExecutionTotalClockTimeMs</a>	Total clock time used to execute point queries in milliseconds.
	<a href="#">PrimaryKeyField</a>	Gets or sets the primary key field.
	<a href="#">RowsWriteTotalClockTimeMs</a>	Total clock time used to write rows in milliseconds.
	<a href="#">RowsWritten</a>	Number of rows written.
	<a href="#">SchemaName</a>	Gets or sets the schema.
	<a href="#">ShortName</a>	Gets or sets the short name.
	<a href="#">StaticAverageAccessLatencyMs</a>	Technical average round-trip latency in milliseconds (across cloud: network latency + disks + reception, on SCSI: disks) statically configured.
	<a href="#">StaticAverageFullScanRowsPerMinute</a>	Average number of rows that fetched per minute on a full table scan, statically configured.
	<a href="#">StaticAveragePointQueryRowsPerminute</a>	Average number of rows processed per minute on point queries, statically configured.
	<a href="#">StaticAverageWriteRowsPerMinute</a>	Average number of rows written per minute, statically configured.
	<a href="#">TableFunctionParameters</a>	Gets the list of parameters.
	<a href="#">TableName</a>	Gets or sets the name.
	<a href="#">TableType</a>	Gets or sets the type.
	<a href="#">Valid</a>	Gets or sets whether the object is valid.

## WritesExecuted

Number of writes executed.
